In Situ Conservation Biodiversity A

In-situ conservation is on site conservation or the conservation of genetic resources in natural populations of plant or animal species, such as forest genetic resources in natural populations of tree species. It is the process of protecting an endangered plant or animal species in its natural habitat, either by protecting or cleaning up the habitat itself, or by defending the species from predators.

Biodiversity conservation is accomplished in a number of ways. Ex-situmethods focus on species conservation in botanic gardens, zoos, gene banks, and captive breeding programs. In-situmethods use conservation areas as "warehouses" of biological information.
