(1-1) Introduction (1-1-1) Nuclear Reactor Theory and Reactor Analysis In Part 1 "Elements of Nuclear Reactor Theory", we study an overview of nuclear reactors and how nuclear energy is extracted from reactors. Here, nuclear energy means the energy released in nuclear fission. This occurs because of the absorption of neutrons by fissile material.

The process by which collision occurs can be described by an elegant mathematical framework called neutron slowing down theory. Nuclear reactors can use a wide variety of coolants, but not all coolants are suitable for all reactor types. The chapter shows that heavy water is an excellent neutron moderator and reactor coolant.
