heart. A buildup of plaque can narrow these arteries, decreasing blood flow to your heart.

Eventually, the reduced blood flow may cause chest pain (angina), shortness of breath, or other coronary artery disease signs and symptoms. A complete blockage can cause a heart attack.

Americans at Risk for
Heart Disease As
plaque builds up in the
arteries of a person
with heart disease, the
inside of the arteries
begins to narrow,
which lessens or blocks
the flow of blood.
Plaque can also rupture
(break open). When it
does, a blood clot can
form on the plaque,
blocking the flow of
blood.

Atrial fibrillation is an irregular and often rapid heart rate that can increase your risk of strokes, heart failure and other heart-related complications. During atrial fibrillation, the heart's two upper chambers (the atria) beat chaotically and irregularly — out of

coordination with the two lower chambers (the ventricles) of the heart.
