### Mollusks, Worms, Arthropods, and Echinoderms

Segments of the tapeworm (proglottids) are formed so differently from the segments of the other three groups that most zoologists do not admit tapeworms to be metamerically segmented animals. Since the metamerism of Annelida and Arthropoda and that of Chordata probably arose independently, metamerism does not itself imply relationships between the groups; however, the particular metamerism within each group clearly demonstrates the derivative relationship of its members.

### Segmentation | zoology | Britannica

An earthworm is an invertebrate animal with a long, segmented body and no legs. Earthworm Read-and-Answer Quiz Read about the earthworm, then take a quiz on it. Or go to the answers. Label the Earthworm Label the external anatomy of the earthworm. Or go to the answers.
