Solutions Analysis

A Functional Solution Analysis (FSA) is the operationally based assessment of potential Doctrine, Organization, Training, Materiel, Leadership and Education, Personnel, and Facilities (DOTMLPF) approaches to solving (or mitigating) one or more of the capability gaps identified in the Functional Needs Analysis (FNA). It's contained in the Capabilities Based Assessment (CBA).

Functional Solutions Analysis (FSA) - AcqNotes

Solution requirements in a business analysis specify the conditions and capabilities a solution has to have in order to meet the need or solve the problem and provide clarity around delivery needs. They don't define how the solution will solve the problem technically or specifically; that happens later. Solution requirements must meet or support the driving project and business objectives, in addition to meeting stakeholder objectives.

How to Define Solution Requirements through Business Analysis

Volumetric analysis relies on a critical volume measurement. Usually a liquid solution of a chemical reagent (a titrant) of known concentration is placed in a buret, which is a glass tube with calibrated volume graduations. The titrant is added gradually, in a procedure termed a titration, to the analyte until the chemical reaction is completed.

Analyze your cause-and-effect process, and identify the changes needed for various systems. It's also important that you plan ahead to predict the effects of your solution. This way, you can spot potential failures before they happen. One way of doing this is to use Failure Mode and Effects Analysis (FMEA).
